

Representing the importance that ErgoGenesis places on its products and the environment.

Preserving our Resources

BodyBilt's Certified Green logo is our designation to label those ergonomic chairs we've manufactured which contain elements that preserve our natural resources, our environment and air quality.

It's Your Choice

In making a choice to select BodyBilt Certified Green chairs for your office, you may be assured that you will be seated in *the premium* ergonomic office chair, while also making a responsible and positive impact on our world.

Soybeans — used to produce the foam in all BodyBilt chairs

ErgoGenesis A Recognized Industry Leader

Defining an idea such as “Green” is difficult. Many products claim to be “green” but have little to substantiate that claim.

ErgoGenesis, a long-time industry leader among ergonomic seating manufacturers, has taken the lead again in its development and use of environmentally friendly materials, fabric treatments, and processes.

All of these elements combine to produce a truly green product, one that provides comfort, durability and beauty in design while maximizing the benefits upon our environment.

How ErgoGenesis Reduces Our Environmental Footprint

- ◆ Soy-based foam instead of petroleum-based
- ◆ GreenShield Fabric treatments, reduce fluorocarbons by 80%
- ◆ Recycled Fabrics, made of 100% recycled polyesters
- ◆ A selection of GreenGuard-certified fabrics
- ◆ Sustainable designs, which extended the life span of our products
- ◆ 98% Recyclable Content
- ◆ No hazardous waste generation
- ◆ Blanket-wrapped shipping to reduce boxing material waste
